Rultor
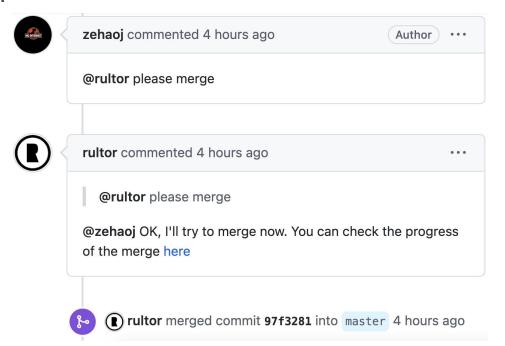

A DevOp team assistant

Zehao Jiang (zehaoj@kth.se)
Yilin Chang (yilinc@kth.se)

What is Rultor?

- A DevOps team assistant.

- Help automate routine operations:
  - Merge
  - Deploy
  - Release

- With an easy-to-use interface

How does Rultor works? A brief workthrough

Let's see the demo!

What makes Rultor special?

- Isolated environment: dock containers

    — Errors are easily reproducible

- Easy to use
    - Simple configuration, all in .rultor.yml file
    - Easy access logs
    - Human-like commands

Take home message

Rultor is not a replacement, but rather a powerful addition to your existing continuous integration solution.
